

**A
Project Report
on
Second Hand Book Buy and Sell Portal
BTech-IT, Sem VI**

Prepared By:
Kakadiya Harshal (IT055)
Kantariya Jay (IT057)

Guided By:
Prof. Ravindra A.Vyas

Dept. of
Information Technology

**Department of Information Technology
Faculty of technology,
Dharmsinh Desai University
College road, Nadiad- 387001**

April 2023

CANDIDATE'S DECLARATION

We declare that the 6th- semester report entitled “**Second hand Book buy and sell portal**” is our own work conducted under the supervision of the guide **Prof. Ravindra A. Vyas**

We further declare that to the best of our knowledge the report for B.Tech. VI semester does not contain part of the work which has been submitted either in this or any other university without proper citation.

Candidate's Signature
Candidate's Name: Kakadiya Harshal
Student ID: 20ITUOS064

Candidate's Signature
Candidate's Name: Kantariya Jay
Student ID: 20ITUOS097

DHARMSINH DESAI UNIVERSITY
NADIAD-387001, GUJARAT

CERTIFICATE

This is to certify that the project carried out on the subject of System Design Practice, entitled “Second Hand Book Buy and Sell Website” and recorded in this report is a Bonafide report of work of

1) Kakadiya Harshal Roll No. IT055 ID No: 20ITUOS064

2) Kantariya Jay Roll No. IT057 ID No: 20ITUOS097

of Department of Information Technology, semester VI. They were involved in Project work during the academic year 2022 -2023.

Prof. (Dr.) R.A. Vyas
(Project Guide),
Head , Department of Information Technology,
Faculty of Technology,
Dharmsinh Desai University, Nadiad
Date:

ACKNOWLEDGEMENT

It is indeed a great pleasure to express our thanks and gratitude to all those who helped us during this project. This project has given us a great opportunity to think, implement and interact with various aspects of the Software Development Life Cycle. We would like to acknowledge all the people who have helped us at one stage or another by providing the much-needed support, encouragement, and groundwork to complete our project.

We express a deep sense of gratitude towards our project guide **Prof. Ravindra A.Vyas** towards his innovative ideas and earnest effort to make our project a success. It is his sincerity that prompted us throughout the project to do hard work using industry-adopted technologies. Our commitment to the application is the sole result of patience, hard work, and dedication being inspired by him.

A blend of gratitude, pleasure, and great satisfaction is what we feel to convey our indebtedness to all those who have directly or indirectly contributed towards the completion of the project.

with sincere regards,
**Kakadiya Harshal
& Jay Kantariya**

ABSTRACT

The second-hand book market is a growing industry, with many people interested in buying and selling used books. Online marketplaces for second-hand book sales have become increasingly popular in recent years due to their convenience and affordability.

This paper presents a portal for buying and selling second-hand books online. The portal offers an easy-to-use platform for users to browse through a large selection of books, list their own books for sale, and connect with potential buyers or sellers. The portal also offers features such as search filters, user ratings, and secure payment options to ensure a smooth and safe transaction process for all users.

The goal of the portal is to provide a centralized platform for second-hand book enthusiasts to connect and exchange books, ultimately creating a sustainable and affordable way to share knowledge and literature.

1. INTRODUCTION

1.1. Purpose

The purpose of this online Used book buying and selling portal is to create a communication and user- friendly web portal for selling and buying Used books online.

1.2. Document Conventions

This document follows MLA format. The bold-faced text has been used to emphasize section and sub-section headings. Italicized text is used to label and recognize diagrams.

1.3. Objective/Goals

The main objective of online book buying and selling portals is to provide future users, particularly students, with a simple means of buying and selling books online. All of these tasks may be completed by users in a controlled and secure environment. It must be simple to use, browse, and locate books in a variety of categories in the used-eBook store. It must be simple to run, and the administrator must have no trouble managing the ordering and sales procedures.

1.4. Project Scope

- Online Book Buying and Selling Portals carrying out the traditional selling process in an electronic form, using the internet. An object of the present invention to provide an electronic reselling system that reduces the amount of money spend, and at the same time, that identifies the real users who needs the book and have offered the contract price, and moreover, to gain revenue to the Original Book seller.
- Online stores are usually available 24 hours a day, and many consumers have Internet access both at work and at home.
- Searching or browsing an online catalogue can be faster than browsing the aisles of a physical store.

1.5. Environmental characteristics

- Customers can get their book delivered instead of actually going and buying the book.
- An user can sell their second-hand books easily.
- Feasibility of making payment online itself.
- Managing of inventory of the books for user becomes easier as customers are not visiting and ordering it online.
- This system saves both time and travelling cost of customers.
- User can get to know different kinds of books that they were unaware of by just searching in the system using keywords.

2. PROJECT MANAGEMENT

2.1 Feasibility Study

2.1.1. Technical feasibility

Viewing our project from a technical point of view (thinking about various tools and technologies being used in developing the system). We have decided that the following technologies will be more than enough to develop a complete working system (including tech. & tools used for project tracking, monitoring, etc. along with development).

For web app development: VS Code

Database: Mongo database

We are equipped with basic workflows of each tool and tech. and capable to explore further if required. Each of the above technologies is freely available and some of the skills are yet to be learned but it is manageable. From this, it is clear that our project is technically feasible.

2.1.2. Time schedule feasibility

We have planned the steps for the completion of our project in the given duration. Firstly, We will perform requirement gathering & analysis by the start of January 2023. We will prepare the SRS document and the GUI design tentatively by January 2023 ending. The diagrams required for the design as well as the database design will be tentatively completed by February 2023. For coding and unit testing, 4 weeks and for system and integration testing another 2 weeks will be required. Hence tentatively by the end of March 2023. We will be able to complete the project and ready for its demonstration at starting of April 2023. Being a 2 members team, we will be able to complete our project in the estimated time.

2.1.3. Economic feasibility

This evaluation often includes a cost/benefit analysis of the project, which assists businesses in determining the viability, cost, and advantages of a project before allocating financial resources.

It also functions as an impartial project evaluation and enhances project credibility by assisting decision-makers in determining the positive economic advantages that the proposed project would give to the business.

2.1.4. Implementation feasibility

We will be working on developing a full Web application for the first time. So, we need to learn the basics of the MERN stack. Also, we need to learn how to connect our project with an online database MongoDB.

Since we are well aware of the basics of JavaScript, we just need to learn how to implement it according to our needs which will take around 2 or 3 weeks and be completed before starting implementation.

2.2. Project Planning

2.2.1 Project Development Approach and Justification

We would be using the Agile model for project development. Agile methods break tasks into smaller iterations or parts that do not directly involve long-term planning. The project scope and requirements are laid down at the beginning of the development process. Plans regarding the number of iterations, the duration, and the scope of each iteration are clearly defined in advance.

Following are the phases in the Agile model are as follows:

1. Requirements gathering
2. Design the requirements
3. Construction/ iteration
4. Testing/ Quality assurance
5. Deployment
6. Feedback

Fig. Agile Model

Fig 2.2.1 Agile Model

Advantages of Agile model:

- Customer satisfaction by rapid, continuous delivery of useful software.
- People and interactions are emphasized rather than processes and tools. Customers, developers, and testers constantly interact with each other.
- Working software is delivered frequently (weeks rather than months).
- face-to-face conversation is the best form of communication.
- Close, daily cooperation between business people and developers.
- Continuous attention to technical excellence and good design.
- Regular adaptation to changing circumstances.
- Even late changes in requirements are welcomed.

Disadvantages of Agile model:

- In case of some software deliverables, especially large ones, it is difficult to assess the effort required at the beginning of the software development life cycle.
- There is a lack of emphasis on necessary designing and documentation.
- The project can easily get taken off track if the customer representative is not clear what final outcome that they want.
- Only senior programmers are capable of taking the kind of decisions required during the development process. Hence it has no place for newbie programmers, unless combined with experienced resources

2.2.2. Project Plan

Task Name	Start	Finish	December				January				February				March			
			1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4
Plan and Feasibility Study	25/12/2022	09/01/2023

Kakadiya Harshal	✓	✓	✓	✓	✓
Kantariya Jay	✓		✓	✓	✓

Table 2.2.3

3. SYSTEM REQUIREMENTS STUDY

3.1 Problems and Weaknesses of the Current System

The following Problems exist in the current system,

- Currently, there are many companies providing this service but they are B2C. They don't have the functionality to add the user's own vehicle to put it on rent.
- And they also charge high commission and processing fees which turns into a high amount of commission for the buy and sell book.
- the above-mentioned are some problems that must be kept in mind while building the website. Some other problems concern all the apps in general like data redundancy, keeping secured data & transactions, concurrency etc.

3.2 User Characteristics (Type of users who are dealing with the system)

There are 2 types of users in the system required:

User:

- Registration
- Login
- Search Books
- View Books
- Buy Books
- Add Books
- Update Books

Admin:

- Registration
- Login
- Search Books
- View Books
- Buy Books
- Add Books
- Update Books
- Delete Listed Books
- Delete Users

3.3 Hardware and Software Requirements (minimum requirements to run your system)

There are no such specific hardware requirements other than basic requirements such as a computer with good internet connectivity and a decent browser that supports React & JavaScript.

Hardware: -

- System: Intel Core i3.
- Hard Disk: 120 GB.
- Monitor: 15'' LED
- Input Devices: Keyboard, Mouse
- Ram: 4 GB

Software: -

- Operating System: Windows Operating System 2000 and Above and Linux
- Visual Studio Code, Google Collab
- MERN stack, Python model
- Mongo database
- Cloudinary for photo storage

Mongo database: MongoDB is a Cloud-hosted, NoSQL database that uses a document model. It can be horizontally scaled while letting you store and synchronize data in real time among users.

Visual Studio Code: Visual Studio Code is the Integrated Development Environment (IDE) for Web app development.

Cloudinary: Cloudinary is a cloud-based photo storage service. We have used it as a storage of users and event posters.

3.4 Constraints

3.4.1 Hardware Limitations

- o There is only one limitation of this web app, the device must have a browser.

3.4.2 Reliability Requirements

- o The web app does demand much reliability and it is fully assured that the particular information about the users should be secured and flow is maintained and accessed according to the rights.

3.5 Assumptions and Dependencies

- 1) Users have sufficient privileges to access the internet.
- 2) browser on the Device is running smoothly.
- 3) Database updates are giving expected and accurate results.

4. SYSTEM ANALYSIS

4.1 Requirements of New System (SRS)

4.1.1 User Requirement

- A. Student
- B. Faculty

1. User: -

- Registration: User need to register first with their basic registration details and nee to create a valid login id and password.
- Login: Using valid login credentials, user need to login into the system in order to access the system.
- Search Books: When user is logged into the, he/she search a book and in result got a related book according there book title, author and edition.
- View Books: Once user is logged into the, he/she may view all the added books with their details.
- Buy Books: User can surf various book of their choice and buy them.
- Add Books: System allows user to sell their books online buy added the book name and its details.
- Upload Books: User need to upload a book if he/she wants to sell a book.

2. Admin: -

- Registration: Admin need to register first with their basic registration details and nee to create a valid login id and password.
- Login: Using valid login credentials, user need to login into the system in order to access the system.
- Search Books: When user is logged into the, he/she search a book and in result got a related book according there book title, author and edition.
- View Books: Once admin is logged into the, he/she may view all the added books with their details.
- Buy Books: Admin can surf various book of their choice and buy them.
- Add Books: System allows Admin to sell their books online buy added the book name and its details.
- Upload Books: Admin need to upload a book if he/she wants to sell a book.
- Delete Books: Admin can delete not useful book.
- Delete Listed User: Admin can delete user.

4.1.2 System Requirements

1. Functional requirements

- **Registration:**
 - Input:** - User enter own username and password and confirm password.
 - Output:** - Confirmation of registration status and will be redirected to appropriate page of the application.
 - Description:** - User need to register first with their basic registration details and need to create a valid login id and password.
- **Login:**
 - Input:** - User details including the username and the password.
 - Output:** - User will be redirected to appropriate page of the application if and only if all the credentials are valid.
 - Description:** - Using valid login credentials, user need to login into the system in order to access the system.
- **Search Books:**
 - Input:** - User can enter a book for search a book.
 - Output:** - User will be get relevant book.
 - Description:** - When user is logged into the, he/she search a book and in result got a related book according their book title, author and edition.
- **View Books:**
 - Input:** - User can enter a book for view a book.
 - Output:** - User will able to show book information.
 - Description:** - Once user is logged into the, he/she may view all the added books with their details.
- **Buy Books:**
 - Input:** - User enter a book name.
 - Output:** - User can buy that book easily.
 - Description:** - User can surf various book of their choice and buy them.
- **Add Books:**
 - Input:** - User enter a book details like book name, book author, price and edition etc.
 - Output:** - User book details will be added in database.
 - Description:** - System allows user to sell their books online buy added the book name and its details.
- **Update Books:**
 - Input:** - User enter book details that will be update for a book.
 - Output:** - User book details will be updated
 - Description:** - User need to upload a book if he/she wants to sell a book.

3.2 Admin:-

- **Login:**
Input:- Admin details including the username and the password.
Output:- Admin will be redirected to appropriate page of the application if and only if all the credentials are valid.
Description:- Using valid login credentials, admin need to login into the system in order to access the system.
- **View Books:**
Input:- Admin details including the username and the password.
Output:- Admin will be redirected to appropriate page of the application if and only if all the credentials are valid.
Description:- Admin can view all the added books online with their details.
- **View User:**
Input:- Admin details including the username and the password.
Output:- Admin will be redirected to appropriate page of the application if and only if all the credentials are valid.
Description:- All the registered user details will be displayed to the Admin.
- **Search Books:**
Input: - Admin can enter a book for search a book.
Output: - Admin will be get relevant book.
Description: - When user is logged into the, he/she search a book and in result got a related book according their book title, author and edition.
- **Delete Books:**
Input:- Admin can enter a book.
Output:- Admin get message book delete successfully.
Description: - Admin delete not useful books.
- **Buy Books:**
Input: - Admin enter a book name.
Output: - Admin can buy that book easily.
Description: - Admin can surf various book of their choice and buy them.
- **Add Books:**
Input: - Admin enter a book details like book name, book author, price and edition etc.
Output: - Admin book details will be added in database.
Description: - Admin allows user to sell their books online buy added the book name and its details.
- **Update Books:**
Input:- Admin enter book details that will be update for a book.
Output:- Admin book details will be updated
Description:- Admin need to upload a book if he/she wants to sell a book.
- **Delete Users:**
Input:- Admin enter user name.
Output Admin get message user delete successfully.
Description:- Admin can delete ford user.

2 Non-Functional Requirements

2.1 Usability:

- The portal should have a simple and intuitive navigation system that allows users to easily find what they are looking for.
- Each book listing should have clear and detailed information about the book's condition, edition, author, and any other relevant details.

2.2 Reliability:

- The portal should have measures in place to ensure that the books being sold are authentic and accurately described.
- Users should be able to leave reviews and ratings for sellers and buyers, which can help to build trust and credibility within the community.

2.3 Performance:

- The portal should be able to handle a growing number of users and book listings without sacrificing performance.
- The portal should be secure and protected from threats such as hacking, malware, and phishing attacks.

2.4 Safety Requirements:

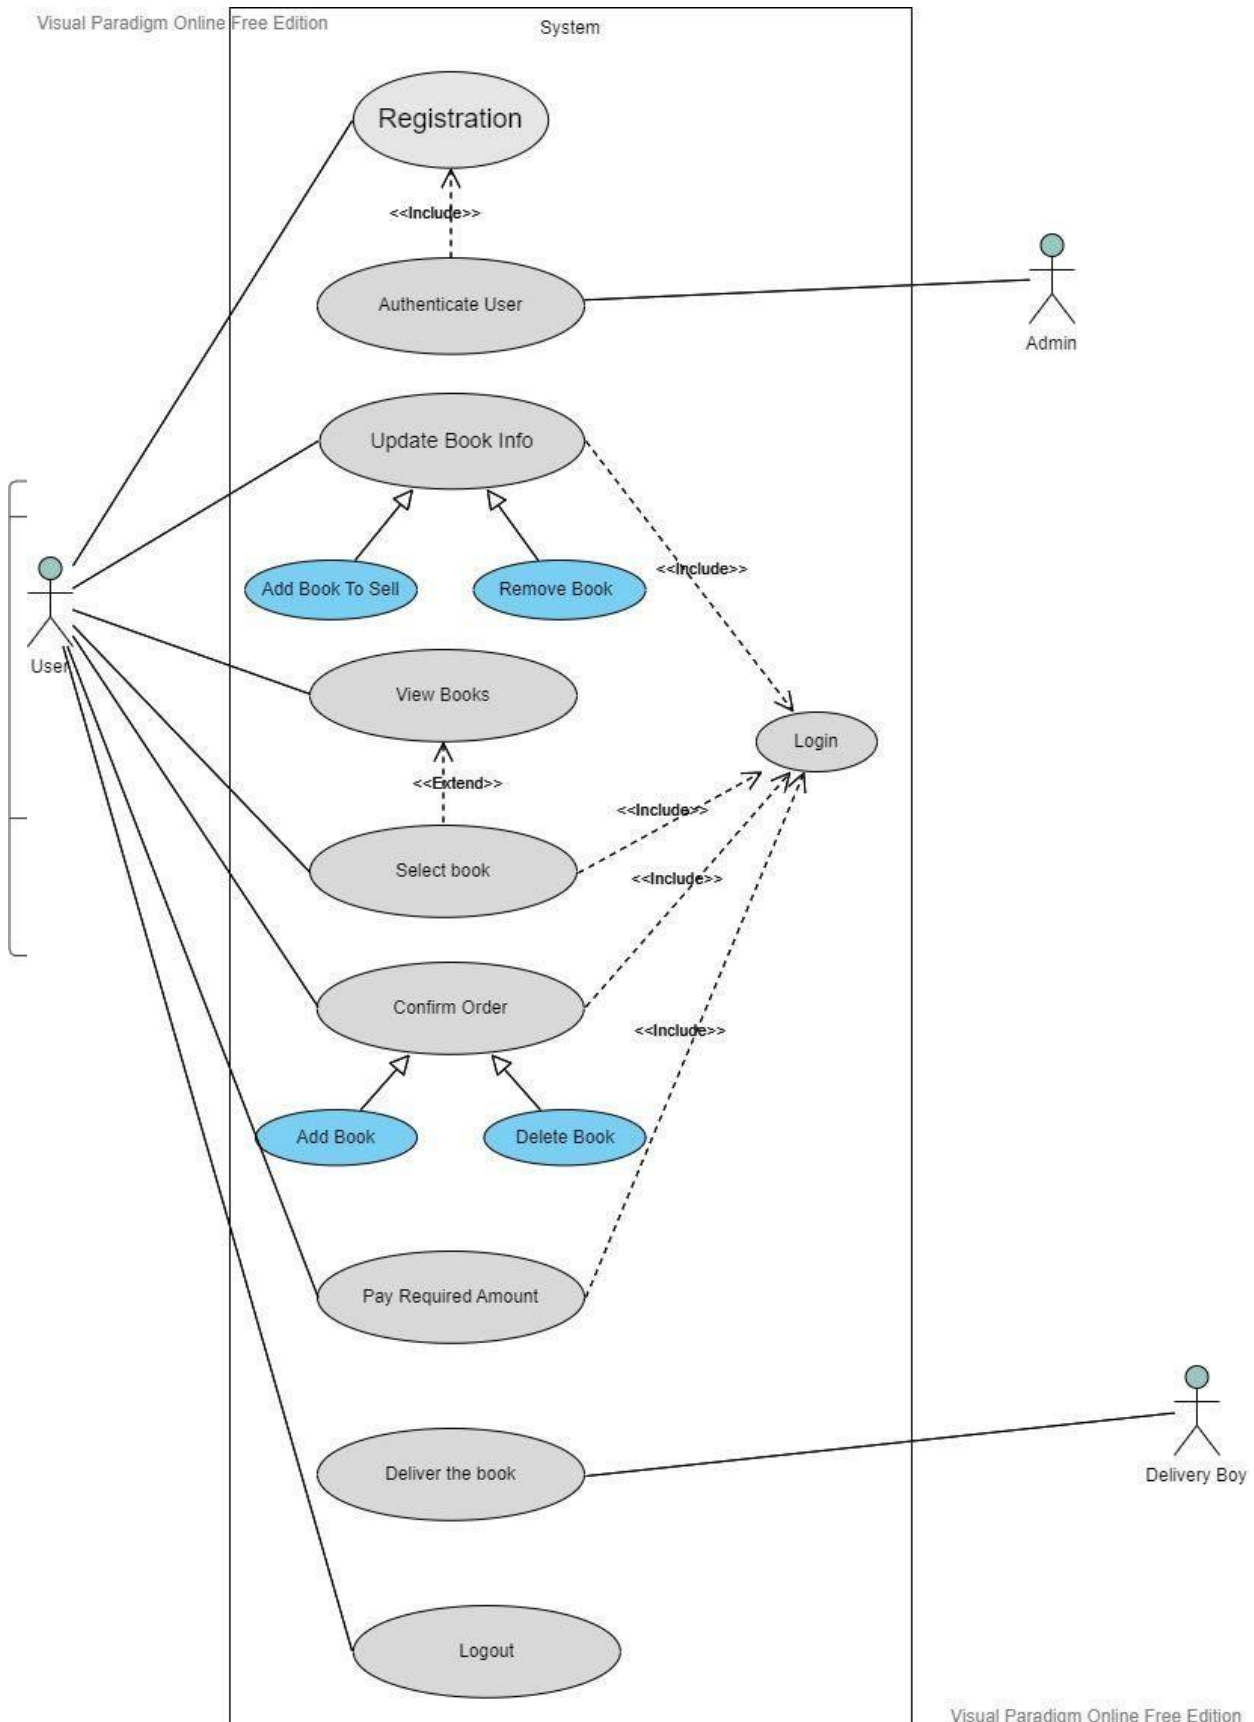

- The portal should require users to verify their identity before they can buy or sell books. This can include requiring users to provide their name, address, and payment information, and verifying this information through a third-party service or manual review process.

2.5 Security Requirements:

- The portal can require users to verify their identity through two-factor authentication, such as a text message or app-based authentication code, in addition to a username and password.
- The portal can use SSL encryption to protect user data and transactions, ensuring that all communication between the user's device and the portal is secure.

5.4. Activity Diagram

(User Registration Activity Diagram)

Fig 5.4(a)

(Buy and sell book Activity Diagram)

Fig 5.4 (b)

6. IMPLEMENTATION PLANNING

6.1 Implementation Environment (Single vs Multi-User, GUI vs Non-GUI)

For the implementation, we have used: Visual Studio Code

Our project is built using Visual Studio Code seeing that it is a web application we saw fit that Visual studio code provided us with all the required basis for the successful implementation of our web app. Also, for storing our data we have used Mongo database which enables our web app to run at all times.

6.2 Program/Modules Specification

The following Modules are implemented:

- User
 - Manage Profile
 - Purchase Book
 - Sell Book
 - Search Book
 - Delete Book
- Admin
 - Purchase Book
 - Sell Book
 - Search Book
 - Delete Book
 - Manage Profile
 - View all Registered User
 - Delete Registered User
 - View all uploaded Books
 - Delete all uploaded Books

6.3 Coding Standards

To make the system coding easy, easy to remember, and reduce the chances of errors, some techniques are used at the time of coding of the application which is called coding standard. The coding standard which we adopted during the coding is explained as follows:

- Each nested block should be properly indented and spaced.
- The code should be properly commented on for understanding easily. Comments regarding the statements increase the understandability of the code.
- Better to avoid the use of digits in variable names.
- The names of the function should be written in camel case starting with small letters.
- The name of the function must describe the reason for using the function clearly and briefly.

7. TESTING

7.1 Testing Plan

The testing technique that is going to be used in the project is White box testing. In White box testing the Tester knows the internal structure of the code or the program of the software.

7.2 Testing Strategy

The development process repeats this testing subprocess several times for the following phases.

- a) Unit Testing.
- b) Integration Testing

Unit Testing tests a unit of code (module or program) after the coding of that unit is completed.

Integration Testing tests whether the various programs that make up a system, interface with each other as desired, fit together and whether the interfaces between the programs are correct.

Testing is carried out in such a hierarchical manner to ensure that each component is correct and the assembly/combination of components is correct. Merely testing a whole system at the end would most likely throw up errors in components that would be very costly to trace and fix.

7.3 Testing Methods

Black Box and White Box Testing:

In black-box testing, a software item is viewed as a black box, without knowledge of its internal structure or behavior. Possible input conditions, based on the specifications (and possible sequences of input conditions), are presented as test cases.

In white-box testing knowledge of internal structure and logic is exploited. Test cases are presented such that possible paths of control flow through the software item are traced. Hence more defects than black-box testing are likely to be found.

Out of the 2 methods for testing, black box testing and white box testing, we would be using the white box testing as we are well aware of the internal functionalities of our application unlike the black box testing, where we require a 3rd party to test our cases and the internal details are hidden from him.

7.4 Test Cases

1 User

Entity	Test Case	Expected Output	Actual Output	Result
Registration of User	Validation	Successfully Registered	Successfully Registered	Pass
Login of User	Validation	Login Successful	Login Successful	Pass

Table 7.4.2 Admin Test Cases

8. USER MANUAL

User Manuals are manuals that enable the user of a system or application to understand the working of the system and help them to use them efficiently. It is usually written by a technical writer, although user guides are written by programmers, product or project managers, or other technical staff, particularly in smaller companies.

Follow below mentioned steps to work with the app:

Home Page:

- From the Home page, you can only see the Post Related Book and their uploaded details.
- If you want to purchase or add your own book, you need to Register.
- Login with your registered email.

About Us page:

Who are We?

We are third-year IT students at DDIT University. While we are not professionals, we created this website to allow anyone to sell a used book that could help someone else.

Developer

This website was designed and developed by Kakadiya Harshal and Jay Kantariya.

9. LIMITATION AND FUTURE ENHANCEMENT

9.1. Limitation

- Misbehavior of User can happen sometimes.
- Server is always available for scheduling mail.

9.2. Future Enhancement

- Mobile app: Developing a mobile app for the portal would enable users to buy and sell books on-the-go, and provide a more seamless and convenient experience.
- Local pickup and delivery: Offering the option for local pickup or delivery could expand the reach of the portal and make it more convenient for buyers and sellers.

CONCLUSION AND DISCUSSION

10.1 Conclusion

According to us, this project gave all of us the confidence to believe in ourselves and a great experience of how to work as a team. It also boosted our requirement gathering, system analysis, designing aspects, technical coding as well as time management skills.

Also, we learned how to work together as a team & collaborate for making ends meet for our web app. We also got an insight into how we would have to work in future at job or startup & how we have to contribute for the good of the entity we are working.

10.2 Discussion

10.2.1 Self-Analysis of Project Viabilities

According to us, this project is absolutely a good start for gaining hands-on experience on projects. It is useful if it is managed according to the goal for which it is made.

10.2.2 Problems Encountered and Possible Solutions

There are so many problems encountered during this project.

- technical problems like maintenance of website, data redundancy
- untechnical aspects like effective teamwork, better communication of our team members' individual ideas & combine them for betterment of the website.

10.2.3 Brief Summary of Project Work

It is a great achievement to successfully complete the project. The prior knowledge of software engineering has helped immensely in overcoming the various roadblocks. We have done work with pre-planned scheduling related with time constraints and weekly progress in project development. Also, we received guidance from **Prof. Ravindra A. Vyas** at all stages of our project which helped in overall betterment of the project.

All in all, it was a beautiful experience which taught us many things needed to succeed further in life during our jobs.
